

Specialized in
Bridge Bearings
Anti-Seismic Devices
Base Isolators
Expansion Joints

DAECHANG Corp.

DAECHANG Corp.

Greetings

대창이엔지는 1992년 창립 이래 20여 년간 국내 주요 도로와 철도 교량에 교량받침 및 신축이음장치를 납품, 시공한 전문 업체로, 안전하고 경제적인 제품을 개발, 공급함으로써 국가 기반 시설 발전에 일익을 담당해 왔으며, 보다 나은 서비스를 제공하기 위하여 R&D Center를 보완, 강화하였고, 서울 사무소를 개소하였습니다.

저희 대창이엔지는 지속적 제품 개발, 연구, 관리, 경영 조직화로 Global 경쟁력을 갖추고, 고객이 만족하고 신뢰하는 기업이 되도록 경주할 것을 약속 드립니다.

감사합니다.

Since its foundation, Daechang has been creating better solution for bridges such as high-speed railways and highways to fulfill our quality philosophy.

Daechang has strengthened its position as the pre-eminent company by its high technology and expertise accumulated from nearly 20 years' experience.

Playing a leading in creating a better quality of life and environment through know-how and up-to-date technologies.

Daechang strives to be a trustworthy company by satisfying our clients with superior quality.

Organization

Business Fields

Design & Engineering

대창이엔지는 교량용 교량받침과 신축이음장치의 설계, 제조, 시공, 유지보수의 Total Service를 제공하고 있으며, 과업의 설계 단계부터 충분한 검토와 연구로 최적의 제품을 최상의 품질로 제공합니다.

Construction

20여년 간 500여개 이상의 현장에 자체 납품 및 시공 경험을 바탕으로 자체 검토, 분석 및 고객과의 긴밀한 의견 교환을 통해 수립된 스케줄에 따라 안전하고 성실한 시공을 수행하고 있습니다.

Technology Development

오랜 경험과 Know-how로 축적한 기술을 제품 개발 및 설계에 적용하고, 이를 각각의 현장에 특화하여 최적의 제품을 제공하고 있습니다.

Maintenance

교량 공용기간 중 발생하는 교량받침 및 신축이음장치의 보수, 보강, 교체 시 교량에 손상을 주지 않고 빠른 시간 안에 작업할 수 있는 특수 공법을 보유하고 있습니다.

As an Engineering Contractor providing total services, Daechang has been processing the competency to undertake many projects including turnkey projects. Daechang conducts research in the design and engineering technologies to construct high effective & economical devices for highway bridges and railway bridges.

Holding a remarkable record of supply and construction for approximately 500 projects, Daechang is well recognized for its advanced technology and construction management system, thus, opening up new markets by expanding its range of business interests to overseas markets.

Technology Development and integrated design system, being backed up by all construction related knowhow in the fields of construction design, management, information, engineering and construction skills, which is applied to our all projects.

Daechang has executed any kind of maintenance requirement such as inspection, repair and rehabilitation.

Chronicle

Re-start [2010~]

기술연구인력 확보 및 조직의 재정비를 통하여 축적된 기술의 표준화, 제품 연구 개발에 힘쓰는 한편 서울 사무소를 개소하여 국내시장 점유율 확대 및 해외시장 진출을 꾀하고 있습니다.

Second Step [2007~2009]

풍부한 현장경험과 제조 경험을 통하여 체득한 품질관리 능력을 바탕으로 하여, 클린사업장 인증, 이노비즈 인증획득, 기업부설연구소 설립을 인증 받았습니다.

Growth [1999~2006]

외적인 성장뿐 아니라 전문 건설업 면허증 등록, 벤처기업 등록, ISO9001인증 획득 등 꾸준히 내실을 다졌으며, 종북 음성에 제조시설을 확충하고 원가절감 및 품질 관리 향상을 도모하였습니다.

Foundation & Challenges [1992~1998]

1992년 창립 이래 국내 중소 교량 및 장대교량 등 대형 프로젝트에 교량받침 및 신축이음장치를 납품, 시공하였습니다.

Seoul Office launched for domination extending not only domestic but also overseas, concentrating on superior quality under the flag of better than yesterday with new state of mind.

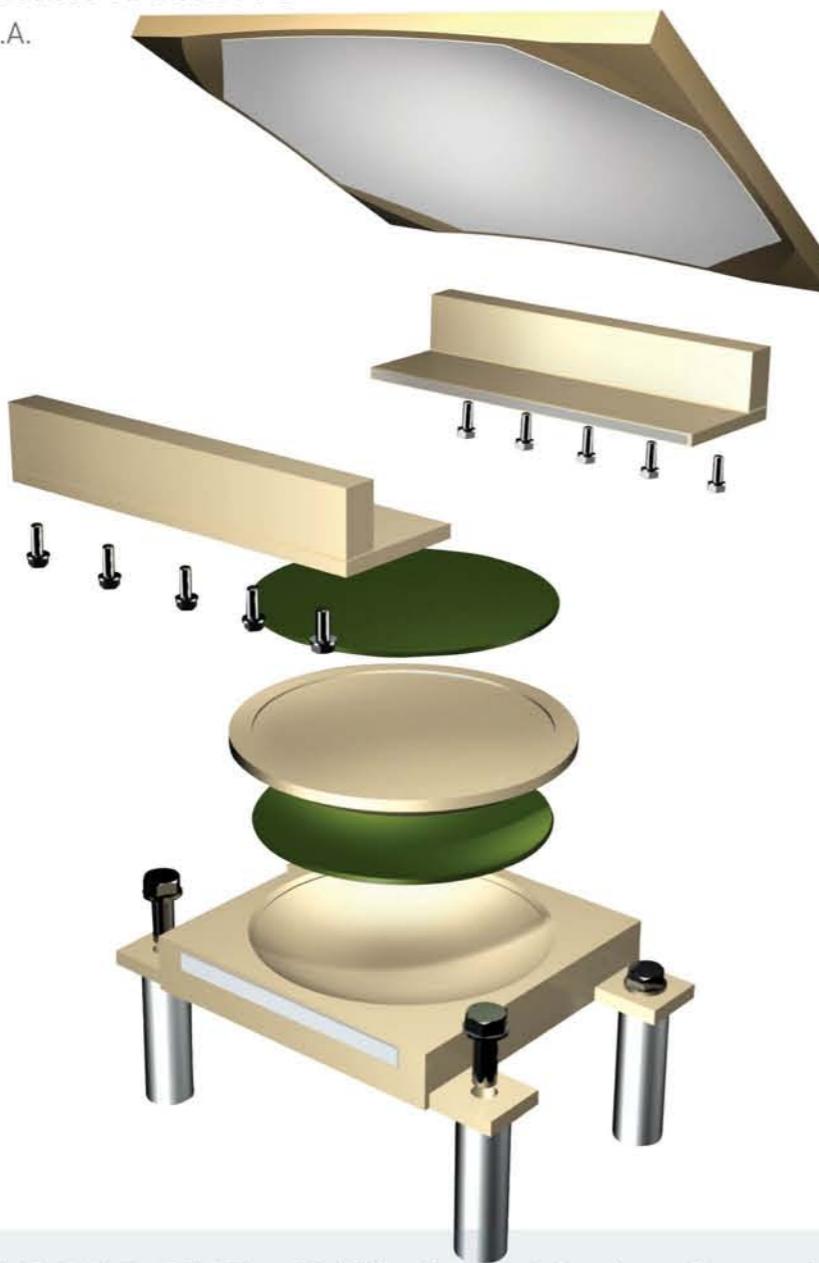

Based on the knowledge and skills acquired a number of construction experience. We continued to develop our technologies and cooperated with others, acquired INNO-BIZ certification issued by Small & Medium Business Administration.

Daechang had a great increase in domestic contracts. During this time we restructure our organizations to fulfill customer's satisfaction. Facilities for manufacturing from cutting materials to painting equipped. Acquired ISO9001 certification refer to Bearings, Expansion Joints, Sound Walls, Bridge Inspection Apparatus in February 2006.

Founded in September 1992 as a Seoul Office of Daechang Metal Co.,Ltd. and registered Daechang Corp. in September 1998. Supplying and installing of bearings and expansion joints for several major Expressway projects such Daejeon-Dangjin Expressway, Seohae Expressway carried out.

SPI Sliding Pendulum Isolators

Licensed product of ALGA S.p.A.

SPI (Sliding Pendulum Isolators)는 지진으로부터 구조물의 안정성을 확보하기 위하여 구조물의 진동을 조절하고 가능한 구조물에 미치는 지진력을 최소화하기 위한 지진격리 받침으로서, 상시 안전한 하중전달 기능 및 원활한 신축·팽창거동, 회전기능을 수행하고, 지진발생 시 구조물에 작용하는 지진력을 최소화하여 구조물의 안정성을 확보하며, 지진 경험 후 완전 복원되는 최상의 지진격리 받침.

특징

- 특수재질의 사용으로 인한 최적의 받침규격.
- 진자운동에 의한 지진 에너지 소산능력 탁월.
- 지진경험 후 복원력이 탁월함.
- 고온저항성이 우수하고 내구성이 탁월한 마찰판을 사용함으로써 내구연한이 큼.

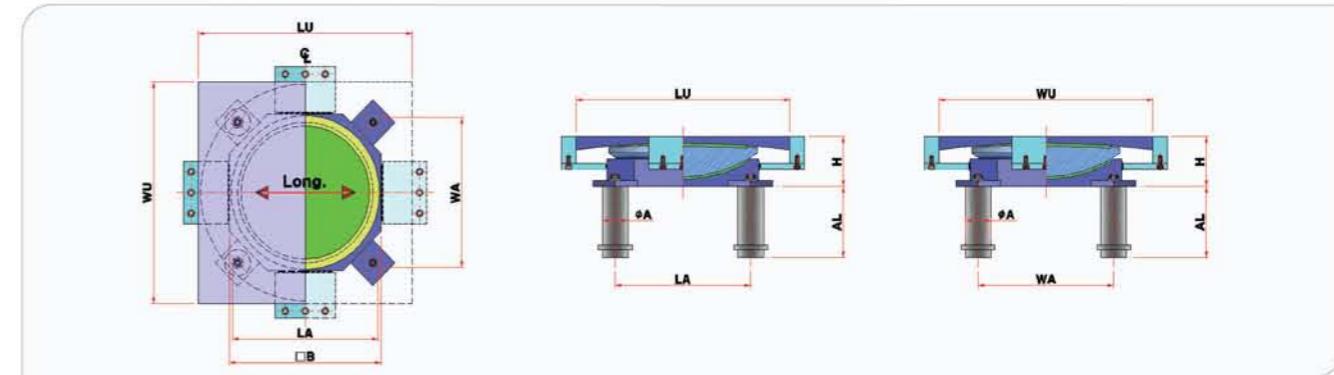

SPIs(Sliding Pendulum Isolators) are self re-centering bearings after seismic events, the most developed seismic protection systems of civil structures, which control the structural vibrations, reduce as much as possible the forces on the structures and keep them in service or with negligible damages after the seismic events. SPIs transmit loads from the superstructure to the substructure, and accommodate movements and rotations at serviceability limit states. SPI with an innovative material for the sliding surface to ensure an optimum capacity of carrying the vertical loads, a high wear resistance to guarantee a long durability of the device in service static conditions, good energy dissipation by friction in case of earthquake motion and a good resistance to high temperatures that occurs during the dissipation by friction.

Features

- Optimum dimension by utilizing an innovative material for the sliding
- Excellent dissipation of seismic energy by pendulum movements
- Excellent self re-centering after seismic events
- Long life
- High load bearing capacity

Sliding Pendulum Isolators

New Spherical Bearings

개량분리형 스페리컬 받침

개량 분리형 스페리컬 받침은 상부구조에서 발생되는 하중을 하부구조로 원활하게 전달하고 부반력 저항장치가 핀타입(PIN Type)으로 상부구조와 연결되어 부반력 제어에 탈월한스페리칼형 받침.

또한, 과도한 이동량에 대한 이동제한 장치가 낙교방지 기능을 수행하며, 교축 직각방향 지진 발생시 상부구조의 상향 축방향으로 발생되는 회전력에 의한 부가적인 비틀림응력을 수용할 수 있는 성능이 개선된 스페리칼형 받침.

특징

- Alga S.p.A.사가 개발한 특수 재질의 마찰판(HOT SLIDE)을 사용하여 받침 규격 최적화
- 부반력 저항력을 핀타입(PIN Type)으로 장착하여 안정적임.
- 지진시 상향 축방향으로 회전시 부가적인 응력이 발생되지 않음.
- 고온저항성이 우수하고 내구성이 탁월한 마찰판을 사용함으로서 내구연한이 큼.

New Spherical Bearings have been developed spherical bearings for the bridges of the high speed railways but are suitable for all kinds of structures.

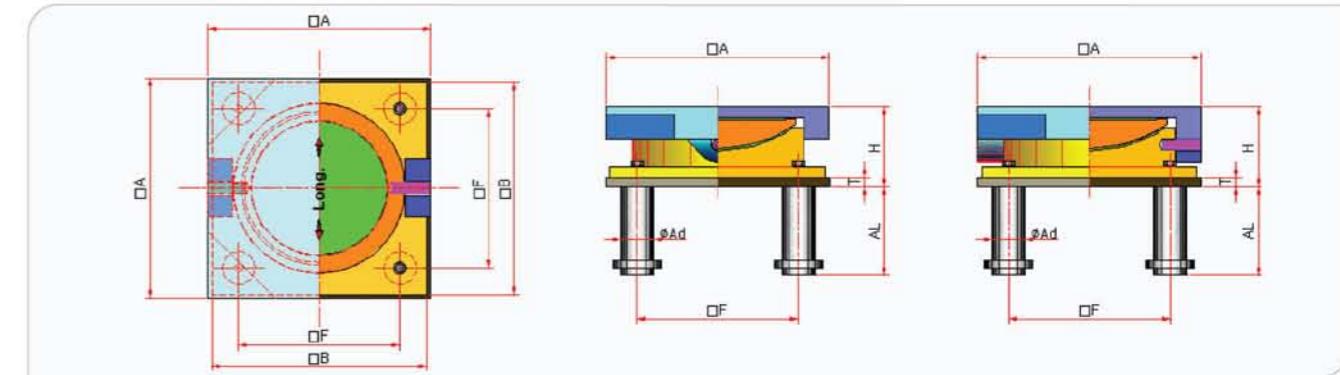

New Spherical Bearings transit loads from the superstructure to the substructure, accommodate movements and big rotations, control the uplift force with PINs connected to upper plates, and allow the additional torsion stress due to rotations occurred in the axial direction of superstructures during seismic events.

Features

- Optimum dimension by utilizing an innovative material [HOT SLIDE] for the sliding
- Resisting uplift force with PINs
- No additional stress when occurring rotations in the axial direction of superstructures during seismic events
- Long life
- High loadbearing capacity

New Spherical Bearings

HOT SLIDE

Behaviour of sliding materials at high temperatures

After 20,000M Sliding Test

HOT SLIDE

PTFE

이태리 Alga S.p.A. 사는 높은 온도에도 안정적이고, 압축강도와 내구성이 탁월한 HOT SLIDE 를 개발하였습니다.

HOT SLIDE 는 유럽위원회의 받침 및 재료 승인 기관인 밀라노 공과대학에서 유럽시험방법 EN1337-2에 기준하여 20,000 M 슬라이딩 시험을 완료하였으며, 최근에는 50,000 M 슬라이딩 시험도 완료하였습니다.

HOT SLIDE 는 원형이나 사각형 등 형태에 관계없이 교량이나 건축물의 받침에 적용될 수 있습니다.

Alga S.p.A. developed an innovative material, Hot Slide, that is high performance special sliding material with very stable coefficient of friction especially designed for high compressive strength, and temperatures and long sliding distances, featuring high stability of the coefficient of friction.

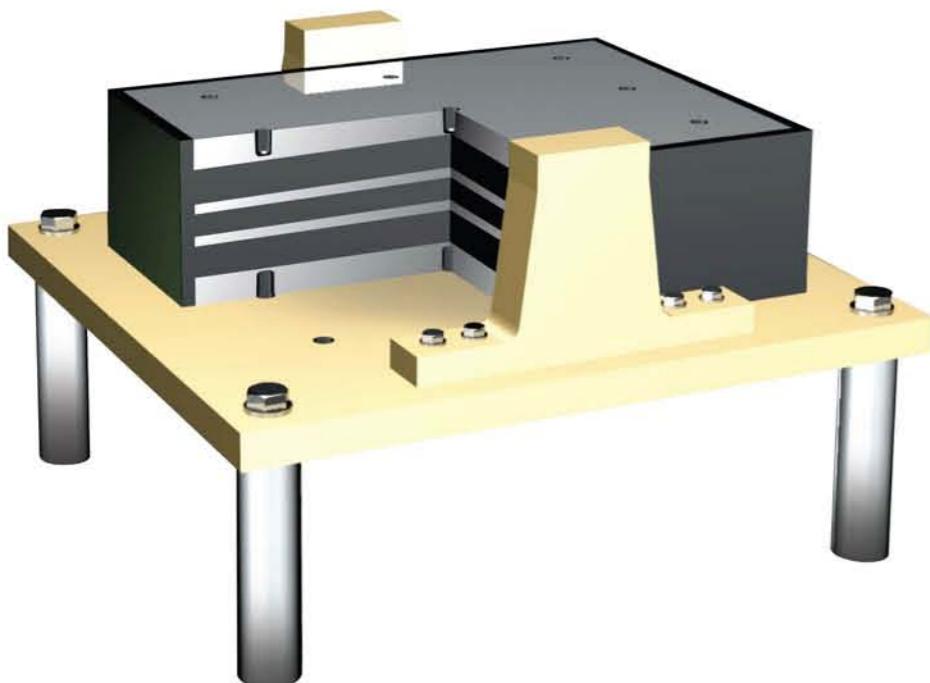

Hot Slide has been tested at the Politecnico di Milano laboratory, notified body at the European Commission for bearings and material approval, using the testing machine designed for the sliding material certification in accordance with the requirement of the code EN1337-2. Several tests have been performed in order to measure the friction as a function of the applied pressure, the velocity and the sliding surface.

The successful 20,000 m sliding test already finished, and 50,000m sliding test has been done.

Hot Slides are circular plates, either flat or curved used in the main sliding surfaces or rectangular strips used in guides, which applicable to any type of bearings for bridge and building structure.

EXRB EXtractable Rubber Bearings

탄성반침

고무와 보강철판이 적층으로 구성되어 수직하중에 대해서는 적층고무의 압축강성으로 저항하고, 수평하중 및 온도등에 의한 신축, 팽창은 대해서는 적층고무의 전단변형으로 저항함

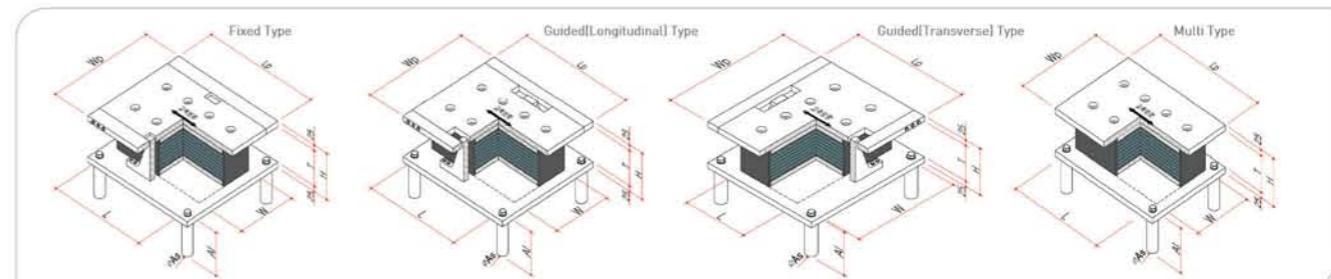

EXRBs(**E**Xtractable **R**ubber **B**earings) are comprised of a block of elastomer that reinforced with steel plates and accommodates both translational and rotational movements due to lateral loads and temperature effects through the deformation of the elastomer.

특집

- 이동제한 장치가 하부 Bolt 형식으로 부착
 - 상판과 연결 판 사이의 흄에서 변위 수용.
 - 유지보수 용이

Features

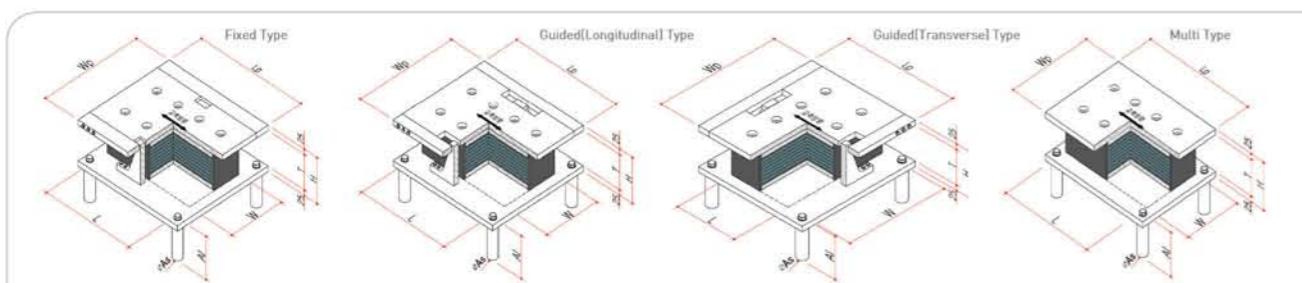

- Movement limiting devices bolted to lower plates
 - Load distribution onto several piers and foundations
 - Balancing the movements to both bridge ends
 - Easy installation
 - Easy maintenance

Pot Bearings

Pot Bearing은 원형의 밀폐용기에 고무를 넣고 그 위에 피스톤을 얹어 고무의 탄성변형에 의해 회전을 얻고, 피스톤위에 불소수지(PTFE)판을 붙이고 윤활유를 주입하여 마찰계수를 감소시켜 수평방향의 변위를 얻게 하는 것으로서 제품의 용기속에 고무가 유체처럼 작용하여 수직반력을 골고루 분포시키고, 타 받침에 비해 높이 또한 낮아 회전에 대한 안전성이 크며 회전에 따른 하중의 편심이 작아서 유리하다.

특징

- 받침 높이가 낮아 회전에 대해 안정적
- 반력이 커질수록 다른 받침보다 경제성이 증가

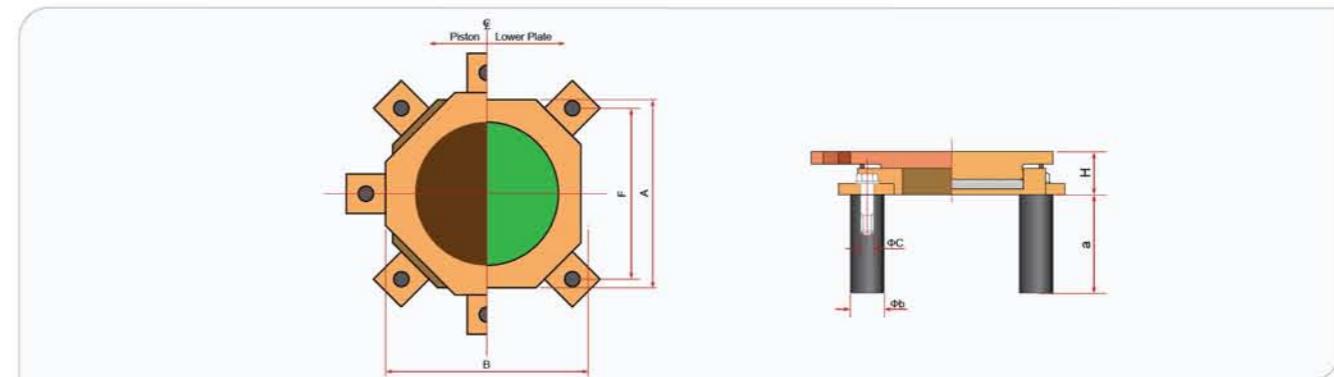

Pot Bearings comprise a plain elastomeric disk that is confined in a pot and behaves like a viscous fluid within the port as the bearing rotates. Flat sealing rings are used to contain the elastomer inside the pot. Vertical loads are transmitted through a steel piston that fits closely to the pot wall and lateral loads are transmitted through the steel piston moving against the pot wall. To accommodate translational movements, a PTFE sliding plates used. Pot bearings are stable and economic devices due to optimum dimension.

Features

- Stability for rotation due to low height
- Economical devices as loads increasing

Spherical Bearings

분리형 스페리컬 받침

분리형 스페리컬 받침 상부구조에서 발생되는 하중을 하부구조로 원활하게 전달하고, 과도한 변위량을 제한하며 낙교를 방지기능을 수행할수 있다

Spherical Bearings transmit loads from the superstructure to the substructure, accommodate movements and big rotations, and control the uplift force with limiting devices.

특징

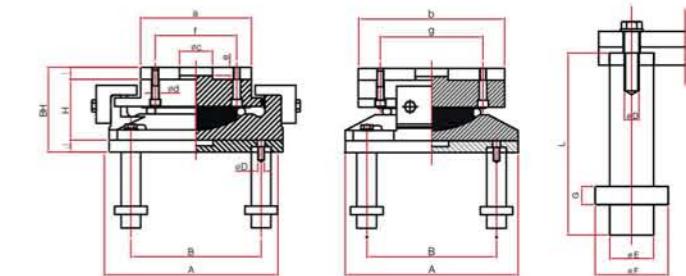

- 회전이 큰 곳, 회전방향이 이동방향과 일치하지 않는 곳에 유리
- 우수한 내구연한
- 하부구조의 파손 없이 교체 및 유지보수 가능

Features

- Allow big rotations
- Suitable installation especially not in the same directions of rotation and movement
- Long life
- Easy replacement and maintenance without breaking lower structure

Spherical Bearings Grade I

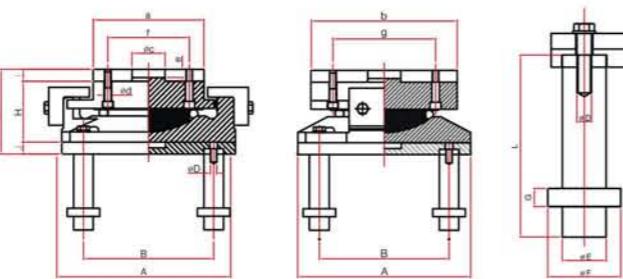

분리형 스페리컬 받침 1등급

DISC Bearings

DISC Bearing은 고강도 폴리우레탄 디스크가 수직하중을 지지하고 회전 변형을 수용하며, 받침 센터의 전단핀이수평력에 저항하는 구조를 가지고 있다. 내구연한이 뛰어나며 유지관리시 디스크의 손상여부의 육안 관찰이 용이하다.

DISC Bearing utilizes a hard elastomeric disc(Polyurethane) to support the vertical loads and a metal key in the center of the bearing to resist horizontal loads.

The rotational movements are accommodated through the deformation of the disc.

특징

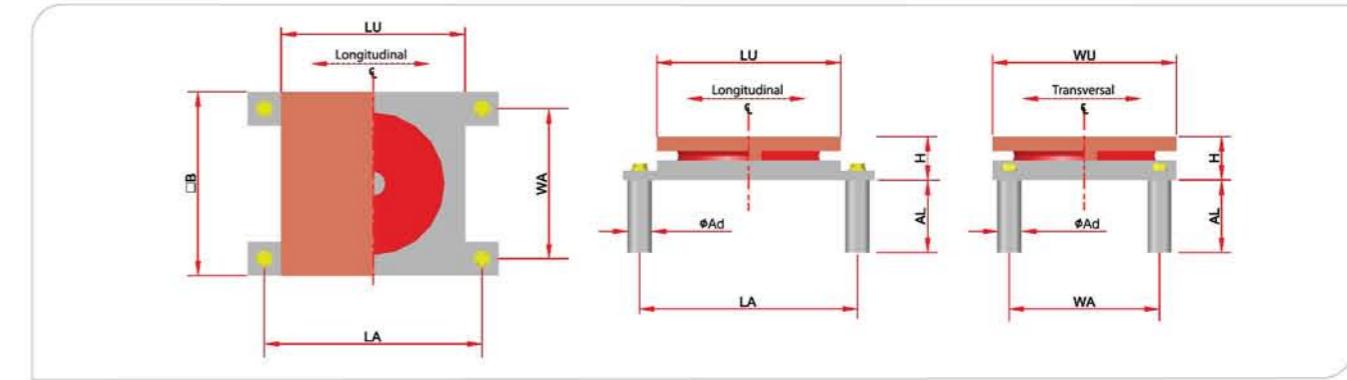

- 경제적인 받침 크기
- 다양한 적용성

Features

- Same vertical and horizontal load capacities with a lower profile than pot bearings.
- Greater service life in most applications

DISC Bearings

1000	50	730	750	780	206	800	660	60	150

※ 상기 치수는 표준치수로서 교량특성에 따라 변경될 수 있음.

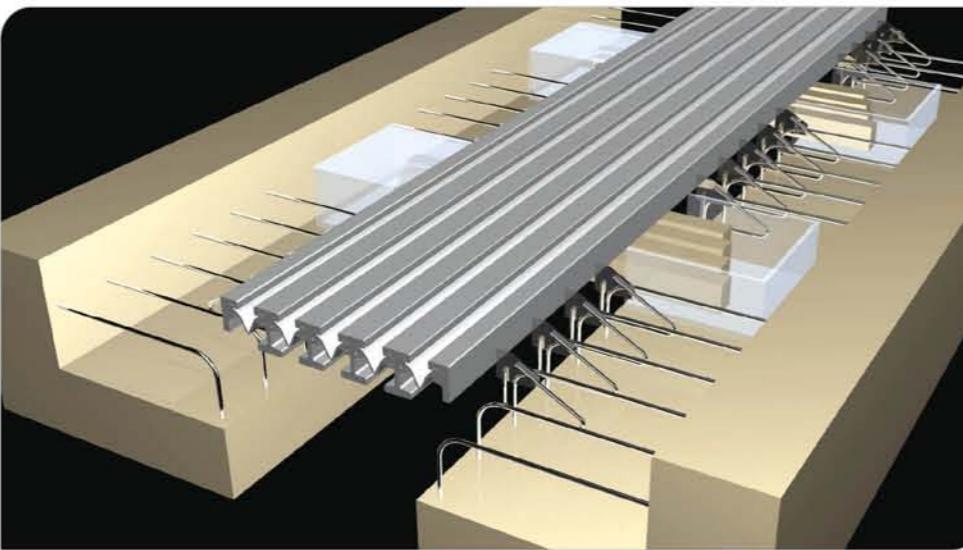

※ The dimensions shown on the above are based on the standard specification and subject to change.

Modular Expansion Joints

- 구조물의 하중 및 변위 수용
- 우수한 내구성
- 완벽한 방수처리

- Accommodation of traffic loads and movements
- Long durability
- Absolute water tightness

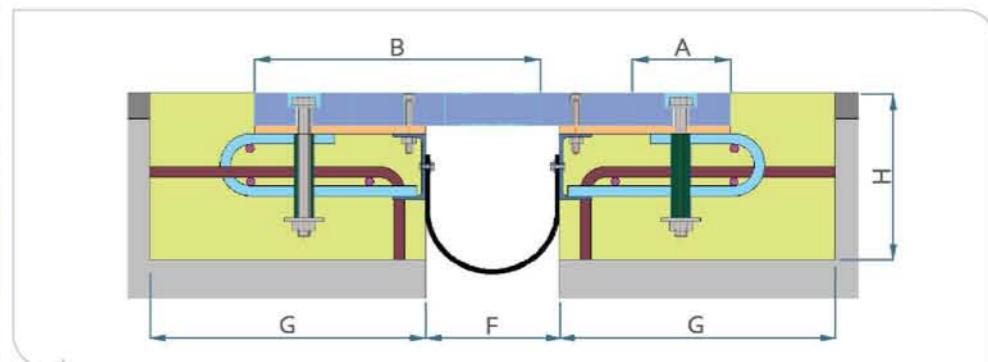

Type	Movement (mm)	S			F			BLOCK OUT

Finger Joints

- 구조물의 하중 및 변위 수용
- 우수한 내구성 및 주행성
- 소음 저감

- Accommodation of traffic loads and movements
- Long durability
- Comfortable driving
- Low noise

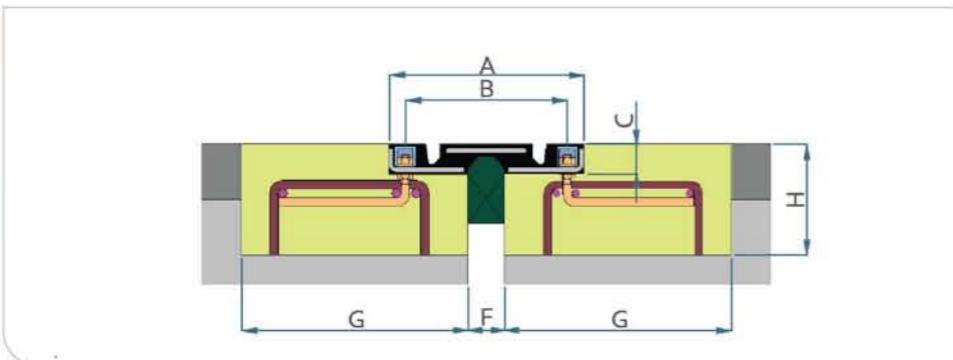

Type	Movement (mm)	A	B	F			BLOCK OUT		
				Min.	Mid.	Max.	G	H

Transflex Expansion Joints

- 주행성 양호
- 소음 저감
- 간편한 시공
- Comfortable driving
- Low noise
- Easy installation

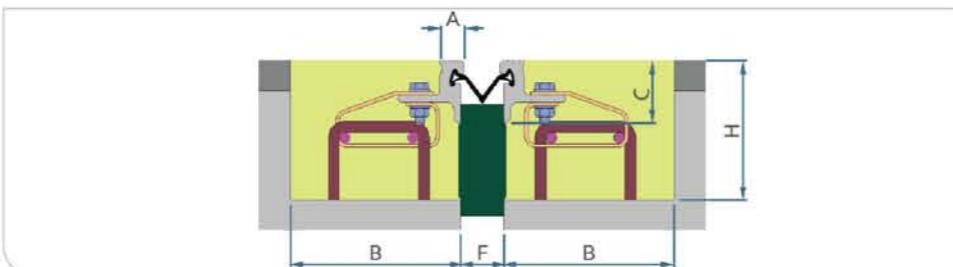

Type	Movement (mm)	A	B	C	F	BLOCK OUT	
						G	H
TF 30	± 15	240	185	32	35	302.5	150

AL Joints

- 주행성 양호
- 간편한 시공

- Comfortable driving
- Easy installation

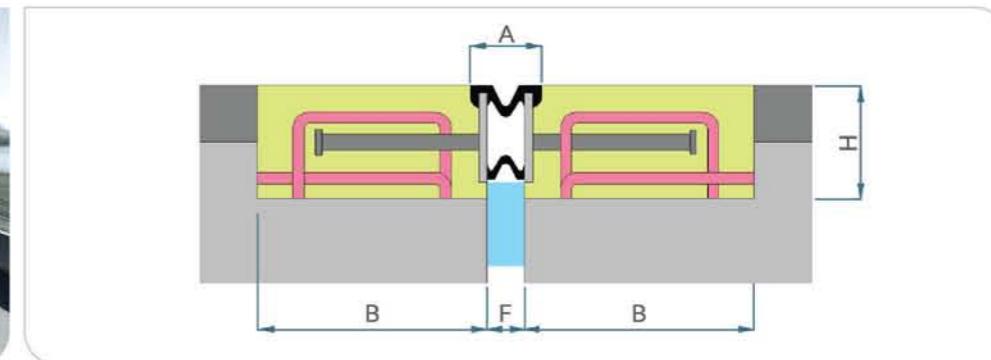

Type	Movement (mm)	A	C	F	BLOCK OUT	
					G	H
50	± 25	35	90	35	250	200
80	± 40	35	90	50	250	200

※ 상기 치수는 표준치수로서 교령특성에 따라 변경될 수 있음.

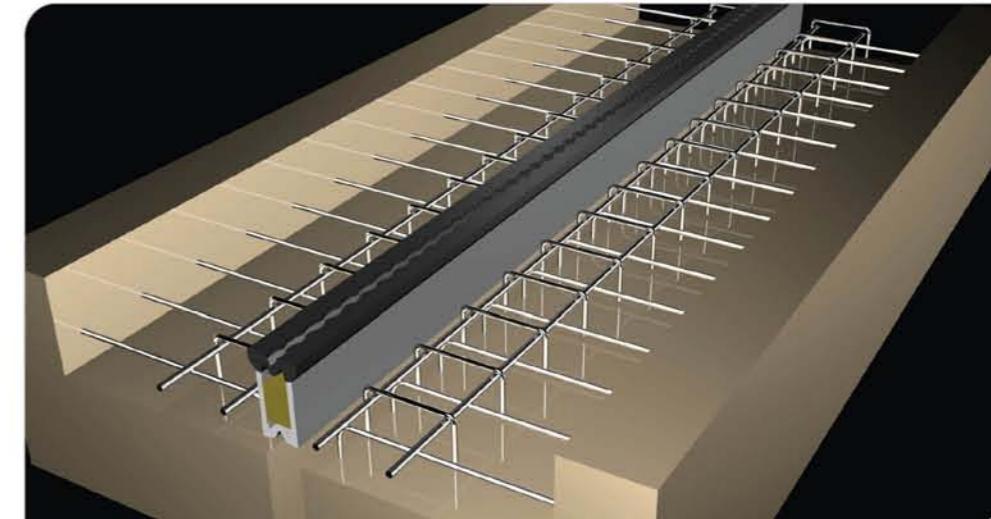

※ The dimensions shown on the above are based on the standard specification and subject to change.

Monocell Joints

- 주행성 양호
- 소음 저감
- 간편한 시공

- Comfortable driving
- Low noise
- Easy installation

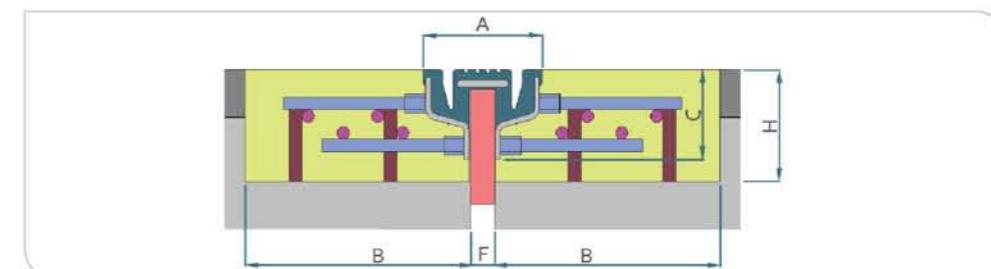

Type	Movement (mm)	A	F			BLOCK OUT	
			Min.	Mid.	Max.	G	H
2G	± 10	80	30	40	50	300	150
4G	± 20	120	60	80	100	300	150
6G	± 30	130	60	90	120	350	150

NB Joints

- 주행성 양호
- 간편한 시공

- Comfortable driving
- Easy installation

Type	Movement (mm)	A	C	F	BLOCK OUT	
					G	H
NB 35	± 17.5	152	106	33	300	170
NB 50	± 25	180	115	55	300	170
NB 80	± 40	255	125	95	300	170
NB120	± 60	332	154	118	330	200

※ 상기 치수는 표준치수로서 교령특성에 따라 변경될 수 있음.

※ The dimensions shown on the above are based on the standard specification and subject to change.
